

JSON to XML Mapping using SAP CPI

This SAP CPI project demonstrates transforming a JSON payload into SAP-compatible XML using JSON to XML conversion, Message Mapping, and transformation functions.

Project Flow

Content Modifier → JSON to XML Converter → Message Mapping → Groovy Logging → End

1. JSON Payload Creation

A Content Modifier was used to create the sample JSON payload inside the integration flow.

Integrations and APIs / week 1-2 / json to xml / Save Save as version De

json to xml

Deployment Status: Deployed on May 26, 2026, 16:29:28, Runtime Status: Started

Integration Process

Content Modifier

General Message Header Exchange Property Message Body

Type: Constant

Body:

```
{
  "orderId": "9001",
  "customerName": "Vyshnavi",
  "orderDate": "2026-05-14",
  "amount": "2500"
}
```

2. Basic Field Mapping

Source JSON fields were mapped to SAP XML target fields.

Home / json_xmltwo / Save Save as version Simulate Deploy ...

json_xmltwo

Structure	Occure...
root	1..1
orderId	1..1
customerName	1..1
orderDate	1..1
amount	1..1

Structure	Occure...
SAPOrder	1..1
SAPOrderId	1..1
CustomerName	1..1
OrderDate	1..1
TotalAmount	1..1

3. concat() Function Mapping

The concat() function was used to prefix the Order ID with 'ORD-'.

Home / json_xmltwo / Save Save as version Simulate Deploy ...

json_xmltwo

Mapping Expression

Functions

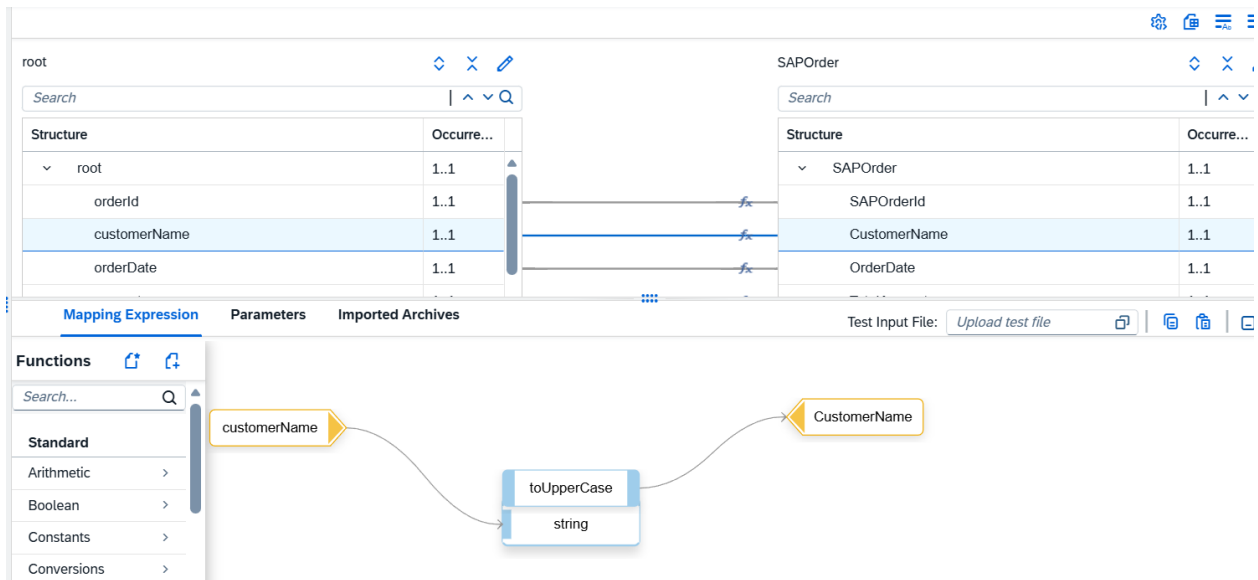

- Standard
- Arithmetic
- Boolean
- Constants
- Conversions
- Date
- Node Functions

Visual Diagram:

```
graph LR; orderId[orderId] --> concat[concat]; ORD[ORD] --> concat; concat --> SAPOrderId[SAPOrderId];
```

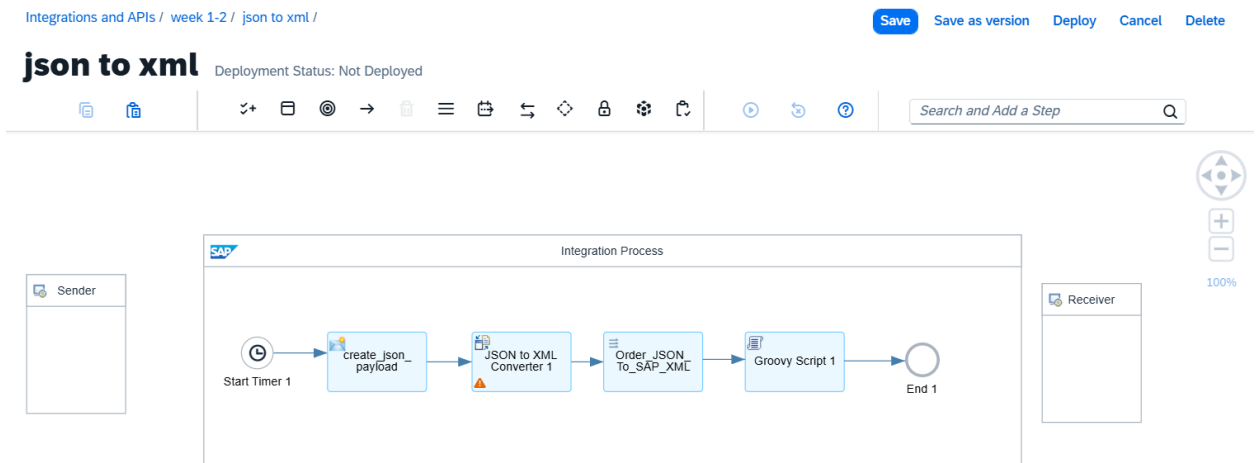

4. Uppercase Transformation

The toUpperCase() function converts the customer name into uppercase.

5. Final Integration Flow

Final SAP CPI integration flow after connecting all integration steps.

6. Successful Execution

The integration flow executed successfully in SAP CPI monitoring.

Mapped XML Output

```
<?xml version="1.0" encoding="UTF-8"?>
<SAPOrder>
  <SAPOrderId>ORD-9001</SAPOrderId>
  <CustomerName>VYSHNAVI</CustomerName>
  <OrderDate>2026-05-14</OrderDate>
  <TotalAmount>2500</TotalAmount>
</SAPOrder>
```

Transformations Used

- JSON to XML Conversion
- Field-to-field Message Mapping
- concat() function for Order ID formatting
- toUpperCase() function for Customer Name
- Groovy logging for output tracking
- SAP CPI deployment and monitoring

Final Output Example

```
<SAPOrder>  
  <SAPOrderId>ORD-9001</SAPOrderId>  
  <CustomerName>VYSHNAVI</CustomerName>  
  <OrderDate>2026-05-14</OrderDate>  
  <TotalAmount>2500</TotalAmount>  
</SAPOrder>
```
